Fractal Functions, Fractal Surfaces, and Wavelets - 2nd ... Fractal Functions, Fractal Surfaces, and Wavelets, Second Edition, is the first systematic exposition of the theory of local iterated function systems, local fractal functions and fractal surfaces, and their connections to wavelets and wavelet sets. The book is based on Massopust's work on and contributions to the theory of fractal. Iterated function system - Wikipedia The fractal is made up of the union of several copies of itself, each copy being transformed by a function (hence "function system"). The canonical example is the Sierpiński triangle. The functions are normally contractive, which means they bring points closer together and make shapes smaller. Fractal Functions, Fractal Surfaces, and Wavelets: Peter R ... Fractal Functions, Fractal Surfaces, and Wavelets 2nd edition is the first systematic exposition of the theory of local iterated function systems, local fractal functions and fractal surfaces, and their connections to wavelets and wavelet sets.

Fractal - Wikipedia The fractal curve divided into parts  $1/3$  the length of the original line becomes 4 pieces rearranged to repeat the original detail, and this unusual relationship is the basis of its fractal dimension. This also leads to understanding a third feature, that fractals as mathematical equations are "nowhere differentiable". In a concrete sense, this means fractals cannot be measured in traditional ways. Fractal Functions, Fractal Surfaces, and Wavelets ... Fractal Functions, Fractal Surfaces, and Wavelets - 1st ... Fractal Functions, Fractal Surfaces, and Wavelets is the first systematic exposition of the theory of fractal surfaces, a natural outgrowth of fractal sets and fractal functions. It is also the first treatment to bring these general considerations to bear on the burgeoning field of wavelets. Sierpinski Triangle - Fractal Formulas The Sierpinski triangle, also called the Sierpinski gasket or Sierpinski sieve, is a fractal that appears frequently since there are many ways to generate it. It is named for Polish mathematician Wacław Franciszek Sierpiński who studied its mathematical properties, but has been used as a decorative pattern for centuries. An Introduction to Fractals - Paul Bourke The Mandelbrot set is created by a general technique where a function of the form  $z_{n+1} = f(z_n)$  is used to create a series of a complex variable. In the case of the Mandelbrot the function is  $f(z_n) = z_n^2 + z_0$ .
